ThumbnailWall
SlideshowBox

Requirements

IDE: Adobe Flash CS3/CS4/CS5
Flash Player: 9+

Properties

Name	Type	Description
autoSlideShow	Boolean	If set to *true*, allows for the image slide show to start automatically after the SlideshowBox component and the album template have been initialized. Changing the value of the property has affect regardless of whether the property is set from the SlideshowBox configuration panel (by checking the autoSlideShow option) or dynamically, by ActionScript code, while the album is playing. The default value is *false*.
backgroundColor	uint	The color of the background displayed by the album. The background is displayed only if the *backgroundVisible* property of the SlideshowBox component is set to *true*. The default value is 0x1C1C1C.
backgroundImage	String	The URL or file path and name of an image displayed as the background of the album. The background image is displayed only if the *backgroundVisible* property of the SlideshowBox component is set to *true*.
backgroundVisible	Boolean	A Boolean value that specifies whether the album template will display the background color or the background image. If it is set to *false*, the album will have a transparent background (the colored background or the background image will be invisible). The color of the album background can be set through the *backgroundColor* property while the background image can be specified through the *backgroundImage* property. The default value is *true*.
bold	Boolean	A Boolean value that, if set to *true*, sets the text from the title and description to bold. Please note that the font with its bold styling has to be embedded into the .swf file. If the *italic*

		property is also set to *true*, you would have to embed the bold-italic style of the font. To find out how to embed the font, please consult the *Applying new fonts.pdf* document.
		Note: *The font settings from the SlideshowBox Panel will not apply to the Preview of the album within the SlideshowBox Panel. To view the font setting changes, you will have to compile your SlideshowBox project.*
		The default value is *false*.
bottomMargin	Number	The space at the bottom of the album, between the bottom margin of the album and the bottom margin of the large image. The large images, including the borders, will be displayed in the space within the specified top, bottom, left and right margins. That spacing is calculated as percentage of the entire album size.
		The default value is 5%.
controlBarAlpha	Number	The alpha transparency value for the scroll bar used by the thumbnails list. The control bar contains buttons for navigating through the album, for changing the full screen mode and for playing or pausing the slide show. The values for the transparency range from 0 (invisible) to 1 (completely visible).
		The default value is 1.
controlBarPrimaryColor	uint	The primary color is the background of the scroll bar used by the thumbnails list.
		The default value is 0x333333.
controlBarSecondaryColor	uint	The secondary color is the color of the controls used by the album: control buttons (navigation/slide show and scroll bar)
		The default value is 0xCCCCCC.
dockThumbBorderColor	uint	The border color for the thumbnails in the dock view. This color is applied for the normal state of the thumbnails.
		The default value is 0xFFFFFF.
dockThumbBorderHeight	Number	The height of the thumbnails in the dock view. The size of the thumbnails also includes the size of the borders.
		The default value is 38 pixels.
dockThumbBorderSize	Number	The border size for the thumbnails in the dock view.
		The default value is 4 pixels.
dockThumbBorderWidth	Number	The width of the thumbnails in the dock view. The size of the thumbnails also includes the size of the borders.

		The default value is 38 pixels.
dockThumbSelectedBorderColor	uint	The border color for the selected state of the thumbnails in the dock view. The default value is 0x00A3FD.
fontName	String	Sets the text from the title and description to the specified font. Please note that the font with its appropriate styling has to be embedded into the .swf file. To find out how to embed the font, please consult the *Applying new fonts.pdf* document. ***Note:*** *The font settings from the SlideshowBox Panel will not apply to the Preview of the album within the SlideshowBox Panel. To view the font setting changes, you will have to compile your SlideshowBox project.*
fontSize	uint	Sets the size of the description text. The size of the title is either the same or is set automatically by the template, depending on the template. ***Note:*** *The font settings from the SlideshowBox Panel will not apply to the Preview of the album within the SlideshowBox Panel. To view the font setting changes, you will have to compile your SlideshowBox project.* The default value is 11.
fullScreenButton	Boolean	A Boolean value that specifies whether the full screen button will be displayed in the control bar. This button allows for the album to enter in full screen mode or normal screen mode. The default value is *true*.
italic	Boolean	A Boolean value that, if set to *true*, sets the text from the title and description to italic. Please note that the font with its italic styling has to be embedded into the .swf file. If the *bold* property is also set to *true*, you would have to embed the bold-italic style of the font. To find out how to embed the font, please consult the *Applying new fonts.pdf* document. ***Note:*** *The font settings from the SlideshowBox Panel will not apply to the Preview of the album within the SlideshowBox Panel. To view the font setting changes, you will have to compile your SlideshowBox project.* The default value is *false*.
largeImageBorderSize	Number	The size of the border applied to the images. The color of the large image border is set through the *thumbUpColor* property. The default value is 3 pixels.
largeImageScaleMode	String	The scale mode applied for the large images. Possible values are *scale* and *scaleCrop*.

		The default value is *scale*.
leftMargin	Number	The space at the left side of the album, between the left margin of the album and the left margin of the large image. The large images, including the borders, will be displayed in the space within the specified top, bottom, left and right margins. That spacing is calculated as percentage of the entire album size. The default value is 5%.
loadOriginalImages	Boolean	A Boolean value which specifies whether the images will be displayed with their original size or if they will be resized to fit the size of the album. This only happens if the images are larger than the size of the album. The default value is *false*.
navigationControls	Boolean	A Boolean value that specifies whether the control bar displays the navigation buttons or not. The navigation controls are the previous/next image buttons displayed in the control bar, used for navigating through the albums. The default value is *true*.
overrideFullScreenChange	Boolean	A Boolean value that allows for the user to override the *FullScreenEvent.FULL_SCREEN* event of the album and handle the full screen event separately. If set to *true*, the component will not react to the full screen changes and will remain at the same size after enterring full screen mode. If set to *false*, the component will handle the full screen event and when entering in full screen mode, it will resize to the full size of the screen, covering any other visual elements that the Flash application might contain in layers below the SlideshowBox component. The default value is *false*.
preloaderPosition	String	Set the position of the wheel preloader. Possible values: *topLeft*, *centered* (in the center of the large image) or *topRight*. When the preloader position is set to top-right, the audio player will hide while the preloader is displayed, if there is any audio file set. The default value is *centered*.
rightMargin	Number	The space at the right side of the album, between the right margin of the album and the right margin of the large image. The large images, including the borders, will be displayed in the space within the specified top, bottom, left and right margins. That spacing is calculated as percentage of the entire album size. The default value is 5%.
scaleBackground	Boolean	A Boolean value that specifies whether the background image is displayed using scale-crop (the aspect ratio of the image is maintained) or whether it is displayed as it is, with its original size and centered on the album background. The background

		image is specified using the *backgroundImage* property. The default value is *true*.
showImageInfos	Boolean	A Boolean value that specifies whether the image information (title and description) will be displayed. The place where the title and description are displayed differs from one album to another. The default value is *true*.
slideShowControls	Boolean	A Boolean value that specifies whether the control bar displays the slideshow buttons or not. The slide show controls are the play and pause slide show buttons displayed in the control bar. The default value is *true*.
slideShowSpeed	Number	The time interval expressed in seconds at which the images will change during the slide show. The default value is 6 seconds.
textBackgroundColor	uint	The color of the background for the image information (title and description) The default value is 0x000000.
textColor	uint	The color of the text for the image title and description. The default value is 0xFFFFFF.
textTopOffset	Number	The top offset for the title and description text. The text can be positioned lower or higher than its default setting. Use this setting if you're not pleased with the position of the text inside the template. **Note:** *The font settings from the SlideshowBox Panel will not apply to the Preview of the album within the SlideshowBox Panel. To view the font setting changes, you will have to compile your SlideshowBox project.* The default value is 0 pixels.
topMargin	Number	The space at the top of the album, between the top margin of the album and the top margin of the large image. The large images, including the borders, will be displayed in the space within the specified top, bottom, left and right margins. That spacing is calculated as percentage of the entire album size. The default value is 10%.
thumbBorderSize	Number	The size of the border applied to the thumbnail images. The default value is 3 pixels.
thumbHeight	Number	The height of the thumbnails. This value includes the thumbnail borders too.

		The default value is 100 pixels.
thumbOverColor	uint	The border color of the thumbnails in over state, when the mouse rolls over them.

The default value is 0x00A3FD. |
| thumbScaleMode | String | The scale mode applied for the thumbnails. Possible values are *scale* and *scaleCrop*. If the property is set to *scale*, the thumbnail images will be displayed so that they will fit inside the area of the size *thumbWidth* and *thumbHeight*. In this case, if the images have different sizes and are both landscape and portrait, the distance between the thumbnail images will be variable.

The default value is *scale*. |
| thumbSpacing | Number | The space between the thumbnails (on rows and columns too). If the *thumbScaleMode* property is set to *scale*, then it is possible that the spacing will be different, depending on the size of the thumbnail images. For *thumbScaleMode* set to *scale*, the thumbnail images will have to fit in an area with the size of *thumbWidth* and *thumbHeight*.

The default value is 10 pixels. |
| thumbUpColor | uint | The border color of the thumbnails in normal state when the mouse is not over them. This is also the color for the large image border.

The default value is 0xFFFFFF. |
| thumbWidth | Number | The width of the thumbnails. This value includes the thumbnail borders too.

The default value is 100 pixels. |
| useScrollBar | Boolean | A Boolean value which specifies whether the scroll bar will be used for scrolling the thumbnails page up and down. If set to false, the thumbnails page will be scrolled by mouse drag and drop movement.

The default value is *true*. |
