# SlideshowBox
Using SlideshowBox with RSS feeds

***Note:*** *The SlideshowBox component is not compatible with Atom feeds. It only works with RSS 2.0 feeds*.

1. Flickr

You can either retrieve the RSS feed from a user's entire photo stream or you can take the RSS feed of a single album
- search on flickr.com the types of images you are interested to see in a slideshow

- select one of the images from the results list to enter into a user's album
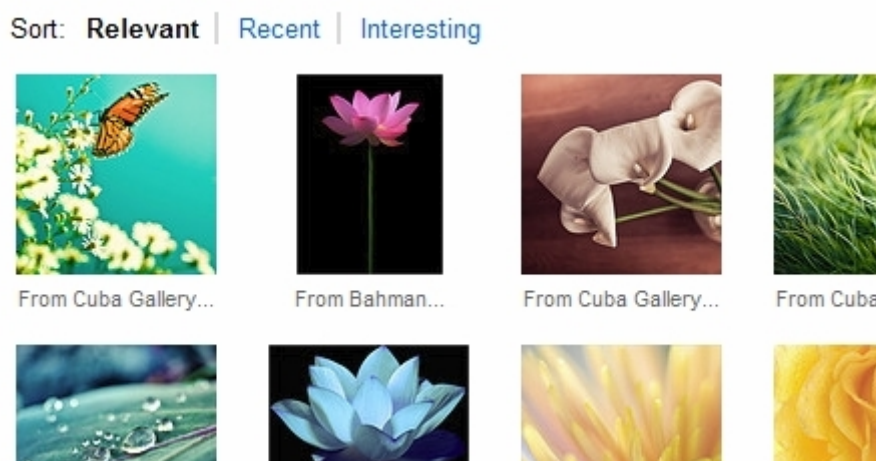

- once the photo page is loaded, select the user id to open his Flickr page
- on the user's Flickr page you can see his/hers photo stream

– on the bottom side of the page there is the RSS link for that photo stream

– another way would be to display the sets' list for the selected user
– from the sets' list select one set and on the bottom side of the album's page you'll have a link to the album's RSS feed: click on it so you can open the RSS feed and copy its URL from the browser's address bar

*Note: Flickr changed its Feed type from RSS 2.0 to Atom, so to make shure that the feed type is RSS 2.0 you should check to see wether the parameter **format=rss_200** exists in the feed's URL and if not, add it like so: http://api.flickr.com/services/feeds/photoset.gne? set=72157625552986828&nsid=36587311@N08&lang=en-us**&format=rss_200***

Note: Flickr limits the number of images added to this kind of feed, so it is possible that the SlideshowBox slideshow will display less images than there are in the actual Flickr album.

2. Picasa

– search on picasaweb.google.com the types of images you are interested to see in a slideshow
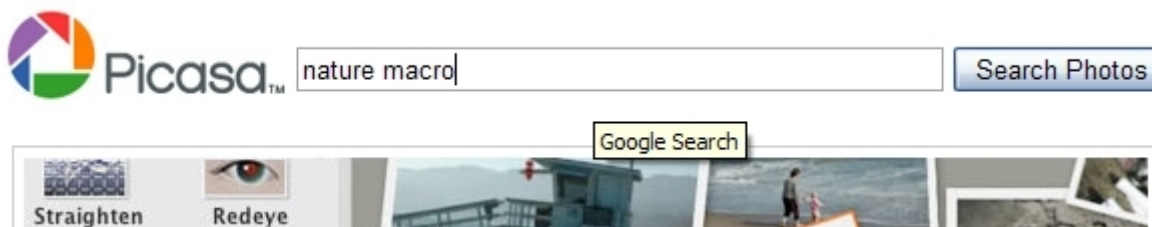

– under each image from the results list there is a link of the user who uploaded that image
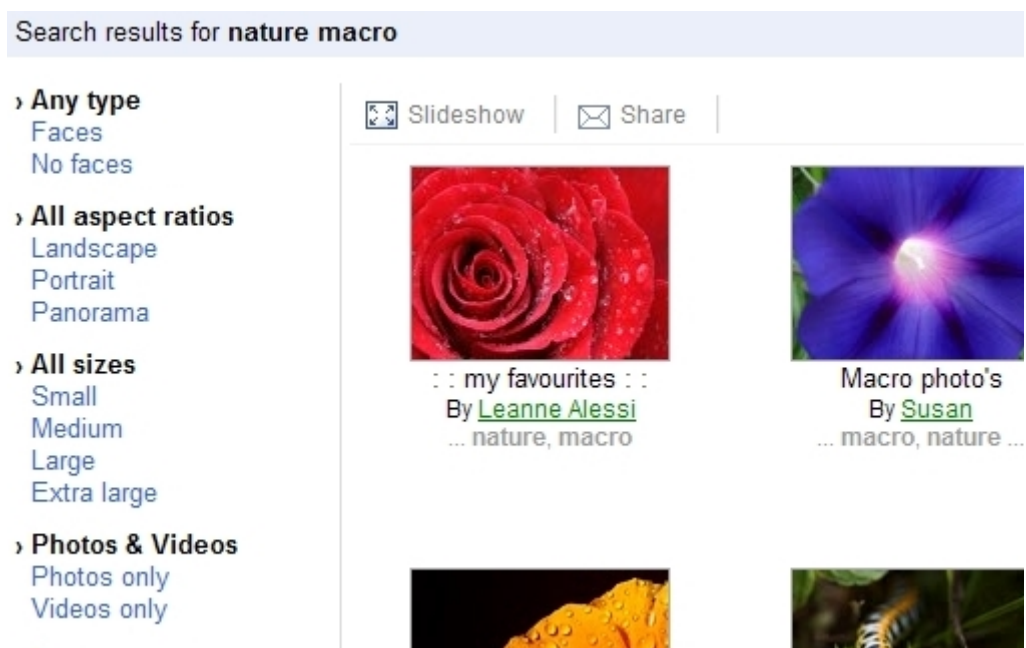

– click on the user's name to display the list of albums for that user
– click on one of the albums of the selected user to bring up the list of images (thumbnail view) for that album
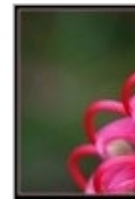

– on the right side of the page you can find a link to the RSS feed of the album: click on it so you can open the RSS feed and copy its URL from the browser's address bar

1g Proboscis", bee
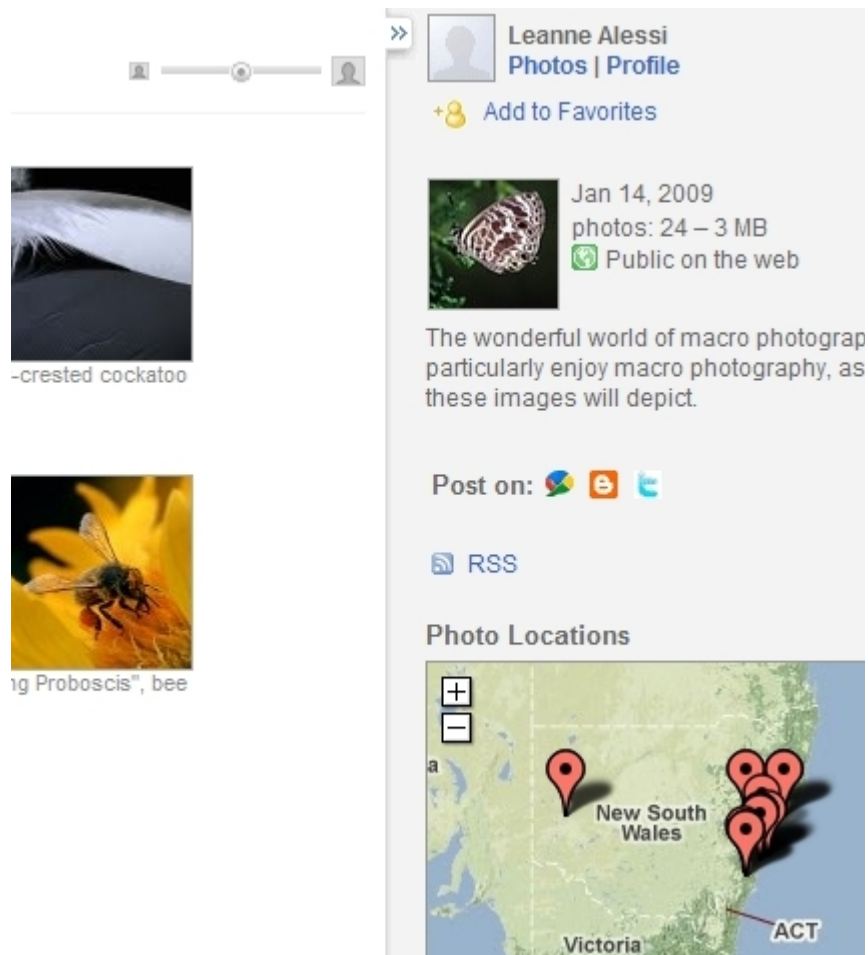

3. PhotoBucket

– search on photobucket.com the types of images you are interested to see in a slideshow

nature macro   search ▾

Search for...
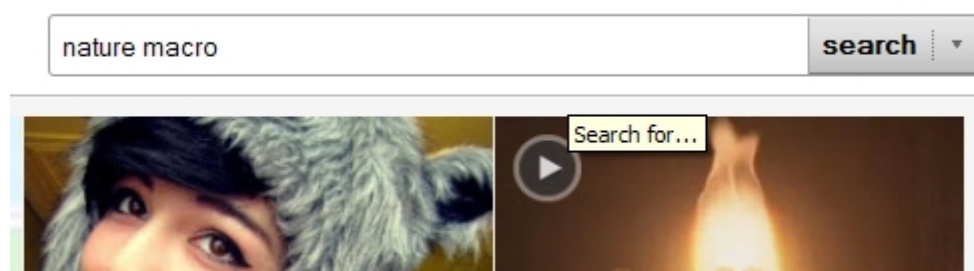

– with PhotoBucket, you can even retrieve the RSS feed for the images included in your search result – at the bottom of the page you'll find the RSS feed for the search result: click on it so you can open the RSS feed and copy its URL from the browser's address bar

Feed for nature macro images

– under each image from the results list there is a link of the user who uploaded that image

📱 send to phone

– click on the user's name to display the list of albums for that user
– at the bottom of the page, there is a link to the RSS feed containing all of the user's content: click on it so you can open the RSS feed and copy its URL from the address bar

Feed for all on2rails's content

– on the top of the user's page you can select the All Albums tab to display the user's albums

– by selecting one of the albums, you can see all the images included in that specific album

– at the bottom of the page there is a link to the RSS feed of the album, next to the link of the RSS feed of the user's entire content: you can click either of them to open the RSS feed and copy its URL from the browser's address bar

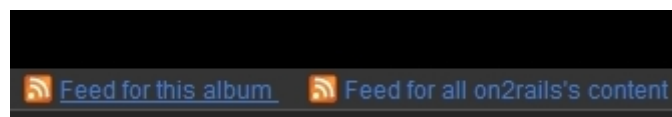

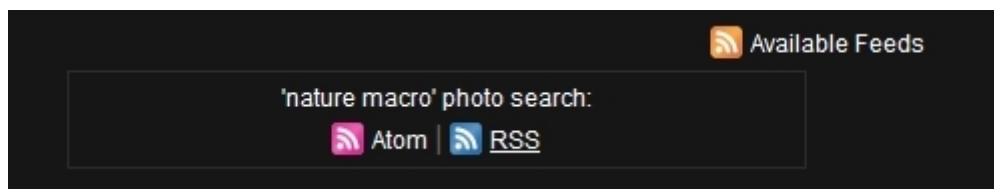

4. Smugmug

– search on smugmug.com the types of images you are interested to see in a slideshow
– with Smugmug, you can even retrieve the RSS feed for the images included in your search result
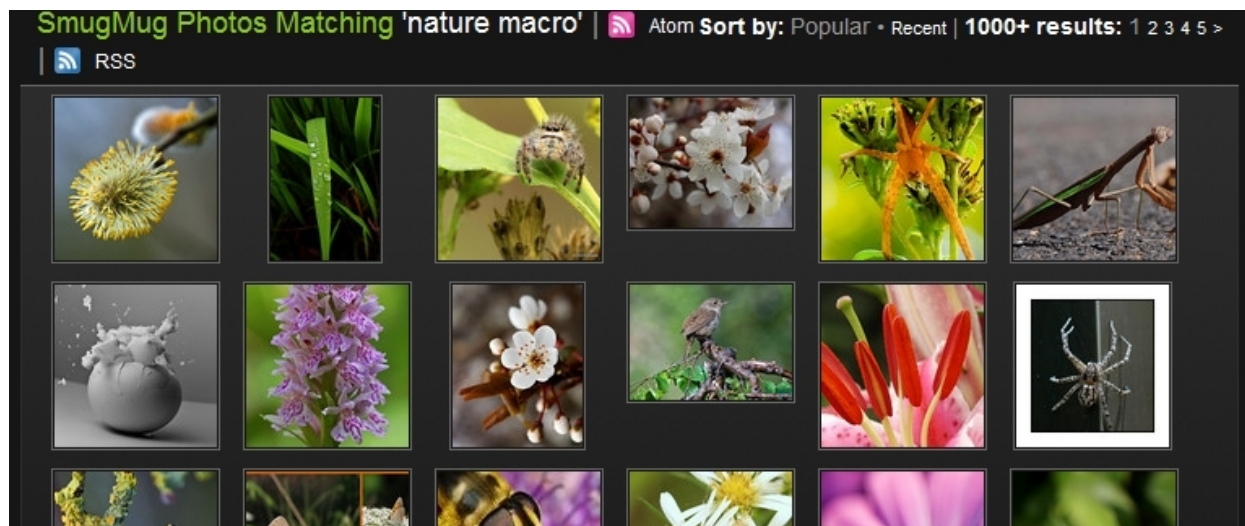

– click on the Available Feeds link at the bottom of the page to open the list of feeds and select RSS to open the feed and copy its URL from the browser's address bar

– by clicking on an image from the search result, you'll be taken to a user's photo stream that contains the selected image
– at the bottom of the page you'll find the same Available Feeds link where you can select and open the RSS feed

– on the top side of the page you'll find the owner's username and by clicking on it, you'll get the list of albums for that user; by clicking on another album you'll be able to get the RSS feed the same way as with the previously opened album

Note: *Smugmug limits the number of images added to this kind of feed, so it is possible that the SlideshowBox slideshow will display less images than there are in the actual Smugmug album.*
